

5.1 (Page 192) Ratios

I shouldn't have eaten that 2nd taco...

Who you calling a monkey?

A **Ratio** is a comparison of two quantities...

Ex. Mr. A's class:

Boys = 9
Girls = 14

I sweat a lot!!

Bro...this is so easy!!

There are 3 ways to write a ratio:

1st way:

Use the word 'to'.

Boys to Girls

9 to 13

2nd way:

Use a colon (:) in place of the word to.

Boys : Girls

9 : 13

Said "9 to 13"

3rd way:

Write as a **fraction.**

Boys

Girls

9

13

**Wait...One
more thang!**

**Ratios can be written in
simplest form too...**

3 to 12 **→** **1 to 4**

4 : 10 **→** **2 : 5**

$\frac{8}{18}$ **→** **$\frac{4}{9}$**

Tape Diagrams: shows relationship between two quantities

Ex. You have 72 baseball cards, for every 5 Astros you have 3 Dodgers.

These 8 parts represent 64 baseball cards.

Because there are 8 parts,

you know that 1 part represents $72 \div 8 = 9$.

- 5 parts represent $9 \cdot 5 = 45$ cards.
- 3 parts represent $9 \cdot 3 = 27$ cards.
